

Surgical Digital Workflows

Creating Efficiency and Profitability for Both Your Patient and Your Practice

Digital dentistry has rapidly evolved over the past several years. These past months have given us a clear understanding of how to use these technologies most efficiently. From consults to final delivery of prosthesis, there are many areas that can be streamlined with virtual modalities. This series of webinars will provide an overview of the available opportunities to transform your practice and highlight key therapeutic areas such as use of digital in Guided Bone Regeneration, in the immediate placement, to planning a sectional to a complete rehabilitation and synergizing the implant placement to the prosthetic while keeping in mind biological concepts of soft tissue healing and esthetics.

In addition to covering the necessary steps when using coDiagnostiX® in treatment planning, this 3-part webinar will teach participants:

1. Benefits of 3D printing in ridge augmentation planning
2. Treatment planning a single implant placement case and synergizing it with CARES® Visual software
3. Treatment planning a complete case using the digital planning

SESSION 1

In this session, the clinician will be familiarized on the benefit of using software planning specifically coDiagnostiX®. In this session we will discuss the segmentation enabling the merging of the Intra-oral scan image and using the different features to produce a segment of the jaw to print or to print a guide.

SESSION 2

In this session, we will up the level of knowledge in treatment planning in a single area to a sectional, in the immediate or in the delayed placement and synergizing with CARES® Visual prosthetic software.

SESSION 3

This session is a more advanced session. In this session, we will discuss multiple implant planning for full rehabilitation detailing the need of reduction guides, to planning the stackable guide for implant placement leading to the temporization phase.
